

GTFS Transit Data Analytics Dashboard

Top 10 Most Popular Stops

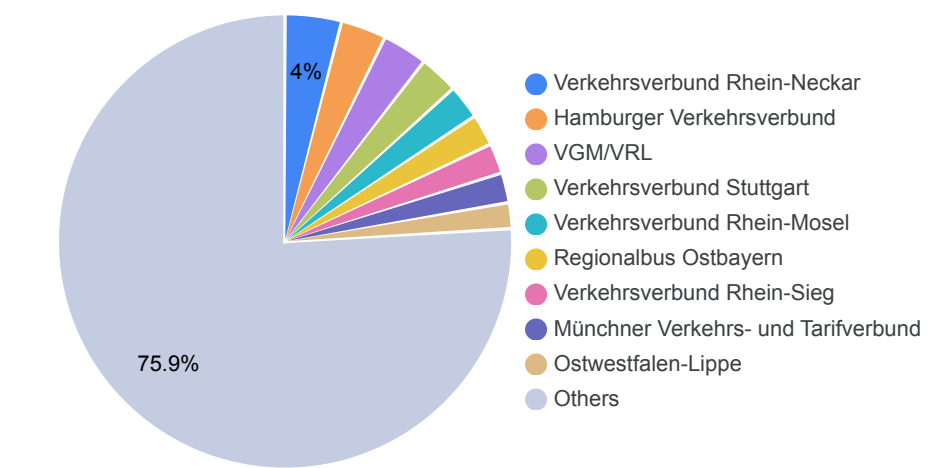

Description:
This bar chart displays the ten most frequently served stops in the GTFS dataset, based on the number of scheduled stop times. It highlights key transit hubs and areas of high passenger activity, helping identify where service demand is greatest.

Top 10 Busiest Routes

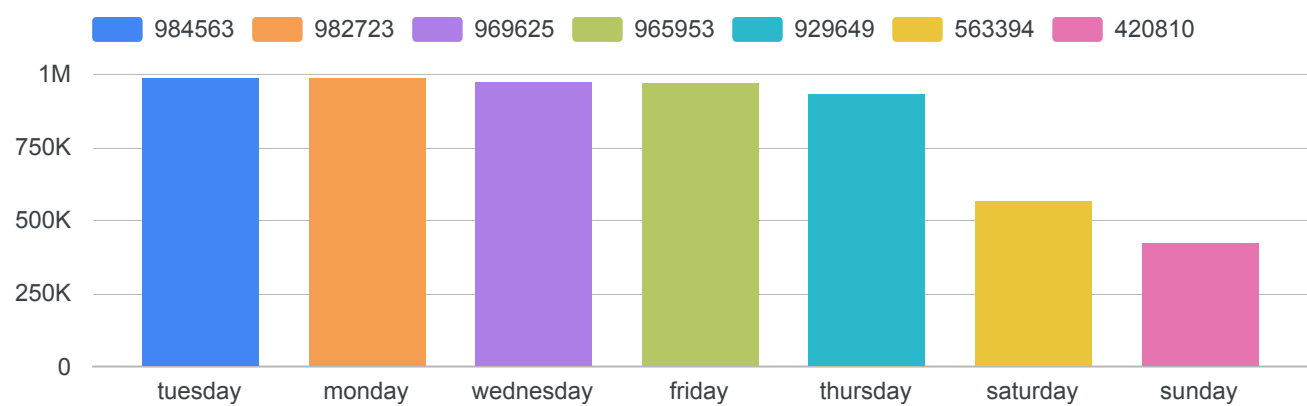

Description:
This chart shows the ten routes with the highest number of scheduled trips. It helps transit operators and planners quickly see which routes are most active, supporting decisions on resource allocation and service optimization.

Distribution of Routes Per Agency

Description:
This pie chart illustrates how responsibility for transit routes is divided among different agencies. It provides insight into the operational landscape, revealing which agencies manage the largest share of routes in the system.

Trips Per Day of Week

Description:
This bar chart visualizes the total number of scheduled trips for each day of the week. It uncovers weekly demand patterns, helping identify peak and off-peak days for more effective scheduling and capacity planning.
